

Made for you

It is not difficult to explain the essence of Lucas; its history speaks loud and clear. For over forty years the blueprint has been repeated in its approach to work and to the customer and is constantly renewed in its details, technologies and solutions. This is why those who have worked with Lucas understand its ability to take the part of the customer, to grasp their needs and interpret their intentions.

The design and construction of trimming-beading, flanging and other special machines has developed in many sectors thanks to the familiarity with the customer and the know-how of a global market with which Lucas interfaces. With its streamlined structure and the competence of its staff, Lucas creates operational solutions that provide excellent customer satisfaction.

Lucas, why?

- **Flexibility**
Lean structure and qualified personnel suited and used to customization
- **Competence**
Lucas cooperates for many years with most renowned producers of tank heads
- **Experience**
Over 180 machines for any type of bottoms working worldwide
- **Reliability**
Machines designed to last, the high repurchasing rate proves it

Machines over the Experience

Ventilation Flanging machines

The reputation of Lucas in the ventilation (HVAC) sector is based on the continuity of its provision of reliable and durable machines.

Growing demand and its predisposition for continuous improvement have pushed Lucas towards research and innovation. The result is the development of a new series of flanging machines particularly suited for manufacturers of industrial ventilators.

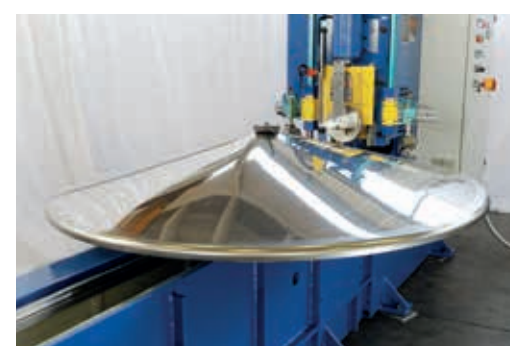

The focal point of the design and construction work was flexibility. The purpose: to provide machines that meet the new demands for versatility in the types of flanging and speed in setup change. The satisfaction demonstrated by our customers is our best result.

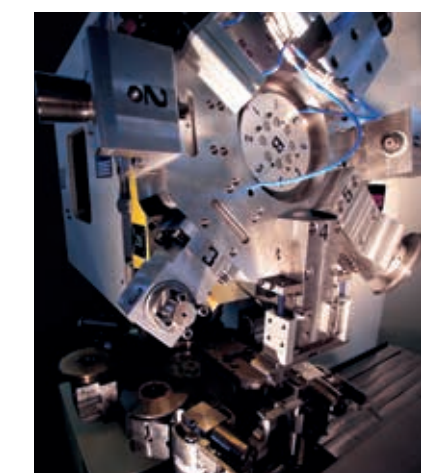

Tank Heads Shear and Beading machines

The long-standing relationship between Lucas and the manufacturers of stainless steel heads for the storage and transport of liquids and food draws its origin from the intuition for satisfying the needs of the great Italian wine tradition. The will to grasp the evolution of a sector and its needs, and to provide qualitative excellence and innovative solutions, has over the years enriched the know-how and proposed solutions of Lucas. The edging of circular and polycentric heads (both dished or bent) for transport tanks, thanks to the high level of co-engineering activity with the client company, has become one of the strengths of LUCAS, also for its rich and documented experience in the area, both in design and construction. The high quality of finish and absolute repeatability of the pieces are the goal of this relationship.

Special Forming Trimming and Forming machines

In over forty years of activity Lucas has received and satisfied the most diverse requests for metal-forming applications. The ability to respond effectively to the demand for manufacturing driven by a high level of customization is the result of a precise balance between expertise, technology and experience.

With various assemblies of the working units and dies, LUCAS trimming-beading machines can perform the most diverse of machining operations, in particular in sheet or drawn metal, both circular and polygonal, in operations of trimming, edging, ribbing, turning, curling, flanging, crimping and threading by deformation.

Reliable machines that are simple and quick to use, our beading machines demonstrate very high performance and safety characteristics and documented quality.
